

New For 2025/2026

Wallace Community Services

10/27/25

District

Dear Eric and Members of the Wallace Community Services District,

Thank you for considering Foothill Sierra Pest Control for your herbicide needs. We look forward to treating your property for the 2025/26 weed season.

This herbicide bid is for the following areas: All roadsides, walking path areas, and fire service roads.

To achieve the best results, we recommend 3 services at your property. We will service Wallace Lake Estates every 3 months; Once each in Winter, Spring, and Summer.

Winter annual service covers winter annual weeds only and is \$2,550. Your winter annual service will include a pre- and post-emergent herbicide. We start our winter service in November, and it continues through February 28th. This service will kill anything that has started growing at the time of application and prevent any other winter annual weeds from germinating.

Your price for Spring service is \$1,400. This service is a post-emergent herbicide treatment. Our spring service starts March 1st and proceeds through April 30th. This is serviced as a spot spray for any weeds that have broken through from the winter annual service. This service is on an as-needed basis. We will come out during this service and assess. You will not be charged for the service if there is no need to spray. If it is deemed necessary to treat, you will be charged per gallon sprayed.

Summer service dates are May 1st through September 30th and will control troublesome summer weeds such as Turkey Mullen, Maretail, and Hairy Fleabane. Summer treatment is \$1,000. This is a post-emergent herbicide treatment only, targeting all summer weeds. This service is on an as-needed basis. We will come out during this service and assess. You will not be charged for the service if there is no need to spray. If it is deemed necessary to treat, you will be charged per gallon sprayed.

This service is for annual weeds only. This does not cover specialty weeds, including but not limited to Star thistle, Poison Oak, Blackberries, and most other brush species. Those services are on an as-needed basis and will be charged per gallon before the application begins.

After approval, we can schedule your site for treatment. Thank you again for considering Foothill Sierra Pest Control for your herbicide needs. Please review this document carefully, sign it, and return it at your earliest convenience. Feel free to contact myself, Ethan, at (209) 480-5975 or the office with any questions.

Sincerely,

Etan Arndt
